Key Features

Global CDN

Our Content Delivery Network caches your website at multiple locations all over the world, using the same internet exchange points (neutral data centres) used by AWS, Google Cloud, Microsoft Azure. There are no usage limits, and it means your site will load faster for users no matter their location. Every customer gets this at no extra cost.

Web Optimisation Suite

Our impressive Web Optimisation suite can automatically apply best practices to optimise your website load times. Alternatively, pick and choose which features to activate yourself. Automatic image resizing, image compression, code minification, lazy loading and many more.

Large Mailbox Storage

With 10 GB as standard, we offer a larger mailbox than most of the UK's best-selling web hosts, meaning storage isn't an issue.

State-of-the-art data centres

Based in the UK and USA, our data centres are manned 24/7 and are protected by high levels of physical security.

Green Hosting

All web hosting servers are powered by 100% renewable energy. Our power use efficiency is as low as 1.12.

User-friendly control panel with 80+ one-click install apps

Our wide range of one-click install apps are great for developing websites and are available to users in just one-click! WordPress, Joomla!, Drupal, OpenCart & many more.

Faster Hosting

Our platform is full of features that optimise the speed of your site. Global CDN, Load-Balanced Cloud Hosting and SSD storage as standard, all assure your site is operating at lightning speeds.

Secure Hosting

Your hosting is packed with enhanced security features such as anti-DDoS protection, free SSL certificates, a Web Application Firewall and two-factor authentication to ensure that both your site and your data is protected.

Automatic Malware Scanning adds another layer of protection and alerts you whenever malware is detected.

Autoscaling

Our unique autoscaling technology means your site has access to as many servers as it needs. Our platform automatically scales resources such as memory and processing power depending on the demand of your site.

Unlike competitors which confine your site to one server, you have access to the whole platform. This ensures that your site speed isn't affected by the traffic of shared hosting 'neighbours' or an influx in demand.
